DevOps Engineer - PFE Internship

About:

Winshot simplifies and streamlines field team management and in-store data collection for brands and retailers.

We have built a fast, intuitive, and automated mobile-first SaaS platform to help business owners and sales directors improve retail store execution and increase field team engagement allowing them to refocus on what really matters: boost their in-store operational excellence that increases sales.

Through Winshot, top management can, in clicks, set-up and launch action plans, surveys, and tasks directly to field teams to be followed during their store visits, and in return, receives full reports and analytics for real-time decision making.

To build such a solution, we have used the latest technology, and thanks to our technical expertise, we were able to develop innovative algorithms that provide performance scoring for every single retail store in the distribution network, and today we continue to add new features.

We have set ourselves a mission to support the digital transformation in the retail industry through our ever-growing range of product features and services.

Since we launched our platform, in march 2020, we've managed to gain the trust of Orange Tunisia and Cosmitto coffee.

Job Description:

Your missions:

Within the founder's team, your mission is to help Winshot infrastructure and its associated operation, administration, and management, with a particular focus on supporting the Operations Engineers in all aspects of System and Server administration.

As a DevOps Engineer Intern you will have several areas of focus:

- Install, deploy, configure, test, monitor, patch, troubleshoot, and maintain web application infrastructure built on Node JS and Mongo DB technologies in an AWS environment.
- Help automate system creation and software deployment workflows for repeatability and reliability.
- Assist in the management of secure replication, backup and archival of system data.
- Assist in the creation of systems monitoring and recovery workflows for use by Tier 1 support.

Preferred experience:

We are meant to work together if...

- You want to learn new technology with talented team members.
- You have the ability to problem-solve and use available resources to learn and debug problems.
- You have the capability to understand and to be exposed to Computer Systems implementation/architecture.
- You are familiar with server, storage & network systems lifecycle administration; installation to decommissioning.
- You are familiar with networking concepts & protocols (firewalls, routers, load balancers).
- You have experience with Git and CI/CD (Continuous integration and continuous delivery) pipeline.
- You have experience with performance tuning of Web and Distributed Application.
- You have experience with docker and docker-compose.-You have experience with scripting/coding.
- You are organized, structured, autonomous.

What we offer:

- Friendly and inclusive workplace culture.
- 6 months paid internship.
- Possibility of a contract of unlimited duration (CDI).
- Great coffee, fruits, snacks.
- Office space in Tunis downtown (Lafayette).

Why you should apply at Winshot:

Our product is great. Our market is huge. We're growing like crazy and need great people to join the **marketing, sales, and technical** team and get it done. We're looking for rock stars young professionals who can come in, learn fast, grow quickly, and drive results.
